

"If you always do what you always did, you will always get what you always got...if nothing changes, nothing changes!

FALL 2013

Give me Liberty...

Beginning the first week in October 2013, Butterfly House Transitional Sober House for Women will be the hosting site for a pilot program called "Seeking Safety" which focuses on PTSD and Drug and Alcohol Relapse Prevention. "Seeking Safety" offers a 6-8 week curriculum that will focus on a combination of Chemical Dependency and Post Traumatic Stress Disorder topics including--PTSD: Taking Back Your Power, When Substances Control You, Honesty, Asking for Help, Setting Boundaries in Relationships, Getting Others to Support Your Recovery, Healthy Relationships, Community Resources, Compassion, Recovery Thinking, Taking Care of Yourself, Coping with Triggers, Self-Nurturing, and Detaching from Emotional Pain.

Adhering to the guidelines of the program, individual counseling sessions will be provided on a weekly basis to residents of Butterfly House and others, by licensed professional counselor/licensed psychologist, Sharon Ward.

Thank you Polk County Mental Health Task Force Co-chairman Sharon Ward, and Polk County Department of Child Protection Director Kay Confer, for choosing to base the program at Butterfly House as well as allowing our residents to be recipients of a program that is sure to benefit them as well as their families.

What's "A-F L U T T E R" @ Butterfly House?

Not much action from butterfly wings this summer, but falling leaves are definitely "aflutter" at Butterfly House. By early October, we should be nearly knee-deep in a colorful assortment of black walnut, butternut, lilac, elm, and maple leaves.

Maintenance, repairs, and "do-overs", have been the theme of late summer and fall at Butterfly House. In mid-August, we

replaced the house, garage, and shed roofs...which to replacement of water damaged siding and painting, and caulking the south and east sides tires and tubes, shift levers, derailleur, seats, the garage door, repaired a faucet on the kitchen benches. Butterfly House was built in 1870 and is always seems to be something to repair or replace. the work could go on forever! In late July, we garden underneath of, or in the vicinity of, Black adversely affected by "black walnut toxicity", the result

underlayment...which led to scraping, of the house. We repaired and replaced bike and brakes. We replaced a main spring on sink, and put a fresh coat of paint on the patio in amazingly good shape for its age, but there I guess you just need to pick a stopping point or discovered that it is not a good idea to plant a Walnut trees. All of our vegetable plants were being a less-than-bountiful yield of beans, tomatoes,

led to cutting trees and trimming shrubs...which led

peppers, and cucumbers. Long story-short, we are currently in process of moving our raised garden beds to the back yard. On the other hand, our grape harvest was spectacular! In early September Butterfly House residents picked and de-stemmed several laundry baskets full of grapes and we made over 60 jars of delicious Concord grape jelly.

FYI--The Butterfly House annual garage sale/fundraiser is planned for October 4^{th} & 5^{th} 2013, so watch for signs. We'll have a large assortment of household items, clothing, furniture, and outdoor items, so come check it out!

This edition of *Liberty* was made possible through grants from:
The Fred C. & Katherine B.
Andersen Foundation & the Walmart Foundation

"Patience is the antidote to the restless poison of the Ego. Without it we all become ego-maniacal bulls in china shops, destroying our future happiness as we blindly rush in where angels fear to tread. In these out-of-control moments, we bulldoze through the best possible outcomes for our lives, only to return to the scene of the crime later to cry over spilt milk."

— Anthon St. Maarten

HOWS THAT WORKIN' FOR YA'?

1

-A word from "The Wicked Housemother"

IT'S NOT FAIR!

"FAIR ISN'T EVERYONE GETTING THE SAME THING...FAIR IS EVERYONE GETTING WHAT THEY NEED IN ORDER TO BE SUCCESSFUL".

I have to admit, I never really looked at it that way... Often, I felt as though I never had a good come-back when a resident would wail at me, "That's not fair! How come so-and-so can do that and I can't". The answer I grew up with is, "Life isn't fair! Deal with it"! Now, I have a really great answer that I absolutely believe in!

Truth: I would like to see all Butterfly House residents be successful in their recovery as well as in their personal lives. What is right and makes sense for one resident; may not be right or make sense for another.

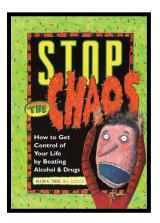

Basic requirements for all residents are that they remain clean and sober, be honest, do daily house chores, attend one recovery meeting per day, attend house meetings, meet with a sponsor regularly, identify and work to accomplish goals, and complete drug education/relapse prevention studies. When a resident requests, for example, to go on a day pass and they haven't completed basic requirements, the easiest and least complicated thing for me, is to say "sure, go ahead". That way, I don't have to deal with the anger, resentment, bad attitude, and "that's not fair!" that comes along with telling someone "no". I try to make fair decisions based on compliance with house rules and completion of program expectations (which all residents agreed to be held accountable to, upon admittance).

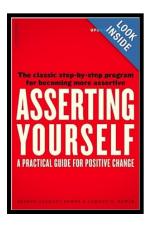

I believe everyone comes to Butterfly House for a reason. Your life wasn't working so well. The choices you were making weren't getting you where you wanted to go. It's time to do things differently than you were doing them before. It's time to be open to taking suggestions. It's time to follow through with what you say you are going to do. It's time to accept that you can't always get what you want...and life isn't always fair...so deal with it!

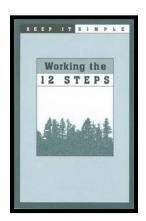

Give it a try, and let me know, "How's that workin' for ya'?"

Signed, The Wicked Housemother

CHECK IT OUT...

Stop the Chaos: This comprehensive, practical guide identifies the telltale signs of addiction, offers suggestions for living alcohol- or drug-free, and teaches the skills necessary for healthy thinking and living.

Asserting Yourself: Utilizing a number of techniques from behavior-change psychology, speech, communications, and acting, the authors Sharon and Gordon Bower outline an effective assertiveness program to help people improve their self-esteem, articulate their opinions, and develop meaningful relationships.

Keep it Simple-Working the 12 Steps: Guidebook to the "Keep it Simple" series, this series of interactive workbooks helps you to work through each of the Twelve Steps thoughtfully and deliberately, reinforcing the effectiveness of your recovery.

When a Man Loves a Woman: An airline pilot and his wife are forced to face the consequences of her alcoholism when her addictions threaten her life and their daughter's safety. While the woman enters detox, her husband must face the truth of his enabling behavior.

First synthesized and viewed as a "miracle drug" over a hundred years ago, amphetamines appear to be here to stay. Amphetamines offer the user quick energy and stamina, as well as a sense of well-being that makes it hard for users to find the downside of its use. Although amphetamine (chemical name: alphamethylphenethylamine) was first synthesized in 1887, it was not tested on human subjects until the 1920s, when laboratories began studying the pharmaceutical benefits. At about the same time, ephedrine, a plant-based drug, was found to be a successful treatment for asthma and other ailments. Since the plants from which ephedrine could be derived were in short supply, the need for a synthesized version of the drug was necessary. In 1927, chemist Gordon Alles synthesized a compound similar to ephedrine, and widespread production began. Benzedrine, the resulting product, was touted as a cure-all for conditions such as depression, narcolepsy, opium addiction and seasickness. Amphetamines were sold without prescription as decongestants in spray inhalers. As word of relief from these conditions spread during the 1930s, so did recreational use of the drug. The sense of euphoria, increased energy, plus the ease of use and affordability made the drug popular across all demographics.

During World War II, armed forces on both sides of the conflict used amphetamines to boost morale and fight battle fatigue. It has been documented that Adolf Hitler was injected with a powerful form of amphetamine up to five times a day. Soldiers returning from the war helped spread the reputation of amphetamine as a useful and safe "pep aid", even though many of them were starting to show signs of addiction. By the 1950s, the medical establishment was prescribing amphetamines freely for such conditions as fatigue, overweight, and depression. In 1958, 3.5 billion tablets were produced in the U.S., nearly enough for every man, woman, and child in the United States to be furnished with 20 doses. Legal, prescriptive use of the drug continued to rise, as did illicit, and recreational use. Truck drivers and others who worked long hours through the night kept the black market suppliers busy. College students also utilized these dealers when they needed to stay awake long hours to study.

In 1971, legal production of the tablets rose to 12 billion, with much of that being diverted to illegal markets. Governments imposed quotas in order to curb the illegal trade, but that did little to inhibit nonprescriptive use. When evidence showed that amphetamines were actually more harmful and less effective than other treatments, doctors showed more discretion in their prescription of them. Nevertheless, the black market continued to flourish and amphetamines became a staple of the drug culture of the 1960s and 1970s. Known popularly as "speed", "bennies", "black beauties", "zip", and "keep awake", amphetamines were cheap and easy to obtain. Amphetamines also became popular with groups such as motorcycle gangs (the slang name "crank" is reported to have come from bikers), models (who found it to be an effective diet aid), and suburban "soccer moms" (who embodied the Rolling Stones song "Mother's Little Helper").

With popularity came the evidence that the miracle drug had a dark side: abuse and addiction, along with a host of unforeseen side effects. The phrase "speed kills" was a double entendre in the drug culture, with its reference to both amphetamine abuse and vehicular operation. Eventually, a method of increasing amphetamine's potency was discovered, leading to methamphetamine. Meth has a more pronounced effect on the user, with a strong burst of euphoria, followed by a sense of well-being which lasts much longer than that of conventional amphetamine.

Meth can be smoked, snorted, injected, or ingested with food or drink. The strongest bursts of euphoria come with injecting or smoking it. The most pure and powerful form of meth is called "ice", "glass", "shards", or "crystal". Increased potency leads to increased chance of becoming addicted to the drug. About 90 percent of people who tried meth have said that they believed they became addicted with the first use. Certainly, the first rush of euphoria could lead to a psychological dependency. That rush is the result of meth's ability to induce the brain to release a huge amount of dopamine (the feel-good neurotransmitter in the brain). Meth users will continue to use the drug, a process called "chasing the dragon", trying to duplicate that first, wild rush. As the dopamine levels in the brain are depleted, with little or no time to recover, the user will be unable to achieve a rush like the first one. Still, the high, the feeling of increased energy, enhanced awareness, and intellectual brilliance will last for many hours. The need to stay high supersedes the need for food and sleep, and many users will stay "up" for days at a time, followed by a long "crash" or deep sleep and a sense of depression when awake.

Methamphetamine is relatively easy to manufacture with a few cheap, but hazardous, ingredients. One of the essential ingredients, ephedrine or pseudoephedrine, is in many over-the-counter cold and allergy preparations. Meth cooks' easy access to large quantities of that ingredient led to legislation to put pseudoephedrine-containing products behind pharmacy counters or in locked cabinets. Purchase of these medications requires a show of identification and signature. That has resulted in a drop in the number of meth labs in the United States, but created a market for meth imported from Mexico.

Symptoms of amphetamine use include: loss of appetite, weight loss, wakefulness at odd hours, dilated pupils, and lethargy and depression when not using the drug. Danger signs include symptoms of overheating, such as nausea, lack of perspiration, headache, and muscle cramps; as well as mental symptoms such as paranoia, emotional outbursts, or delusions. Sustained use of amphetamine, and particularly methamphetamine, can lead to health problems such as liver damage, high blood pressure, stroke, heart attack, irregular heartbeat, and damage to teeth. The lack of nutrition, hygiene, and sleep that is the hallmark of amphetamine addiction can also lead to a plethora of other maladies.

Some amphetamine compounds such as Adderal have been found to be effective in the treatment of Attention Deficit Disorder (ADD), making it one of the few amphetamine formulas that physicians continue to prescribe. Individuals with ADD don't experience the euphoria and other effects that can lead to addiction in persons without the disorder. However, people with ADD can, and often do, share or sell their Adderal among friends, which has led to another black market

At present, methamphetamine addiction and crimes related to it continue to put pressure on law enforcement, the court system, social service agencies, and families. While all addictions can be treated, methamphetamine addiction has proven to be one of the most difficult to overcome. The depletion of normal dopamine levels in the brain can take months to restore, and the ensuing depression and anxiety that follows meth addiction often results in relapse.

Butterfly House Transitional Sober House for Women www.butterflyhousescf.org

Butterfly House is a transitional sober house for adult women who are in recovery from alcohol or other drug dependency. Term of stay is 6 months, with opportunity to apply for extended residency. All residents are required to remain clean/sober, identify and follow through with accomplishing goals, become employed, attend one recovery meeting per day, attend Life Skills Group, attend Women's Way through the 12 Steps Group, attend Seeking Safety Relapse Prevention Group, get a sponsor and work the steps of a 12 step program with that sponsor, attend house meetings and activities, contribute service to the community, and contribute to the mutual maintenance of Butterfly House.

Our Mission is to provide a safe, sober residence for women in recovery from alcohol or other drug dependency, while introducing sober-living skills, peer-to-peer fellowship and support, and educational experiences that will aid them in the transition back into their families & communities.

Nova Counseling Services 3240 Jackson St. Oshkosh, WI 54901

In 1982, Nova opened its doors as the first residential treatment center in Wisconsin. In September 2004, Nova built and moved into a new facility located in Oshkosh, Wisconsin. This facility is centrally positioned between Milwaukee and Green Bay. Nova Counseling Services is a State of Wisconsin licensed provider of medically monitored treatment for people suffering from alcoholism and other drug addictions. Treatment at Nova is for individuals who have lost control of their lives and need a safe, structured environment to learn about their addiction. Nova provides residential treatment, intensive outpatient treatment, 90 day halfway house, and other elements of aftercare. For almost 3 decades, Nova has been grounded in the 12 Steps of Alcoholics Anonymous philosophy and believes it is the surest way to recover from the disease of addiction. Education about the illness, knowledge of the 12 Steps, and caring feedback are the cornerstones for change. Nova is not a dual-diagnosis treatment facility. This means that Nova treats clients whose substance addiction is the primary diagnosis. Call Nova Counseling Services to determine if Nova is a good fit for you.

Polk County Health and Human Services 100 Polk County Plaza Suite #50 Balsam Lake, WI 54810

715-485-8400

Mental Health/Chemical Dependency Services include outpatient mental health counseling, community support and programming for the severe and persistently mentally ill, mental health case management for individuals under commitment, psychiatric medication management, substance abuse evaluations and treatment including OWI offenders, referrals and Emergency Services.

If you or someone you know is experiencing an emergency mental health crisis, call the 24 Hour Mental Health and AODA Crisis Line - 1-888-552-6642 or 911. The crisis counselor (available 24 hours a day, 7 days a week) will help connect you with the services and resources you need. After hours, weekends, and holidays, the calls are directed through the 911 emergency system, or by calling 1-888-552-6642. Polk County Behavioral Health accepts most insurance plans, including Medicare and Medicaid (MA). Payment arrangements are provided, including discounted fees for patients who qualify (through a sliding fee scale and an ability-to-pay program).

*Polk County Human Services works in collaboration with the Polk County Mental Health Task Force.

Our Mission is to assist, empower, and build upon the strengths of the children, youth, and adults in Polk County to achieve positive outcomes.

We can never thank you enough...

Walmart Foundation: In June 2013, Moms and Dads against Meth, Inc. received a grant award of \$500.00 from the Walmart Foundation to be used for general operating expenses of our community outreach project Butterfly House Transitional Sober House for Women. Thank you to the Walmart Community Foundation for your faithful support!

Polk Burnett Charities: In July 2013, Moms and Dads against Meth, Inc. received a grant in the amount of \$1000.00 from Polk Burnett Charities to be used for general operating expenses of Butterfly House Transitional Sober House for Women. Thank you Polk Burnett Charities for ongoing support of our community outreach project!

Wisconsin Energy Foundation: In August 2013, Moms and Dads against Meth, Inc. received a grant in the amount of \$500.00 from the Wisconsin Energy Foundation to be used for general operating expenses of Butterfly House Transitional Sober House for Women. Thank you Wisconsin Energy Foundation for your faithful support of Butterfly House/Moms and Dads against Meth, Inc.

St. Croix Electric Foundation: In September 2013, Moms and Dads against Meth Inc. received a grant in the amount of \$200.00 from the St. Croix Electric Foundation to be used for general operating expenses of Butterfly House Transitional Sober House for Women. Thank you St. Croix Electric Foundation for ongoing support of our community outreach project!

Polk County Department of Child Protection Services: "Seeking Safety" 6-8 week Program facilitation with licensed psychologist/therapist for benefit of Butterfly House residents. Thank you for choosing our Butterfly House as a site for this muchneeded pilot program!

"Let $\operatorname{GRATITUDE}$ be the pillow upon which you kneel to say your nightly prayer...

H.E.A.R.T. Inc. ♥

Helping Enable Alcoholics & Addicts Receive Treatment
(Since June 1971)

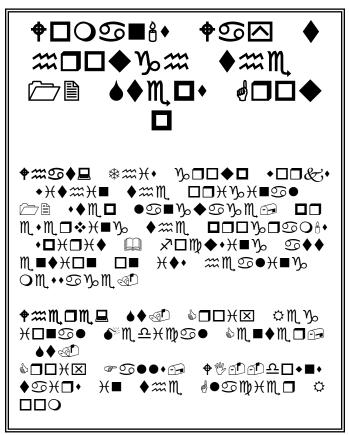

We are a 501© (3) non-profit organization which provides financial support to individuals seeking treatment and help in early recovery. Funds are used to help pay for initial treatment costs, for basic needs while in treatment and we offer a post-treatment program.

HEART works directly with 52 highly effective and nationally recognized treatment centers across the Midwest, some offering clinical treatment while others are alternative programs to traditional rehab. HEART encourages individuals to pursue a 12-step approach to recovery, to integrate themselves within their recovery communities and to establish a firm foundation for a long-term recovery.

Comfort Food for the Recovering Soul

"The Best Pumpkin Pie"

- 2--9" pie crusts-unbaked
- 1--29 ounce can pumpkin puree
- 6 eggs, slightly beaten
- 2 cups light brown sugar
- 1 tsp. salt
- 2 tsp. cinnamon
- ½ tsp. cloves
- ½ tsp. nutmeg
- ½ tsp. ginger
- 1 1/3 cups evaporated milk plus 2/3 cup regular milk to equal 2 cups
- Cool Whip for topping

Prepare 2 pie crusts. Set aside. In a large bowl, combine beaten eggs, sugar, salt and spices. Mix well. Blend in pumpkin. Add evaporated milk and regular milk. Mix well. Pour into prepared pie crusts. Bake at 450 degrees for 10 minutes. Reduce heat and bake at 350 degrees for 40-45 minutes. Pie is done when butter knife inserted in center comes out clean. Cool. Top with Cool Whip.
